Auto-enrollment

SUGGESTED PROCESS FOR AUTO-ENROLLMENT FROM CHILDREN'S MEDICAID/CHIP INTO HTW

1. Woman in Children's Medicaid or the Children's Health Insurance Program turns 18 years old
2. Informational HTW material sent via electronic communication
3. HTW eligibility determined
4. HTW enrollment letter sent
5. HTW coverage begins

The state has the opportunity to use the current auto-enrollment process to reach 19 year olds aging out of Children’s Medicaid and the Children’s Health Insurance Program (CHIP). Expanding auto enrollment would:

Improve Continuity of Care

- Reduces barriers to preventive healthcare access by removing burden of re-applying for new program.
- Leads to better birth spacing, greater access to prenatal care, and healthier moms and babies.

Help Reduce Teen and Unplanned Pregnancy Rates

- Seventy percent of teen births are to older teens – 18-19 year olds.¹
- Forty-two percent of all pregnancies are unplanned.²
- Improves access to family planning services, counseling, and contraception.

Result in Cost Savings³

- HHSC estimates the state would save $58.7 million in general revenue over five years by auto-enrolling women aging out of Children’s Medicaid and CHIP into HTW.
- The bulk of savings would be through the estimated 11,275 averted births that could be realized through improving continuity of care and access to family planning services.
